

› Manufacturing

We are **Bullish** on manufacturing.

We believe in American Manufacturers. Maybe that's because we've seen first hand how successful operations work. The challenges are evident – increased global competition is eroding margins and commoditizing products. Customers are demanding lower prices, higher quality, new features, and customized services. Smart companies know that to remain competitive, they need to keep inventories lean, lead times short, and quality high. They must become customer-centric and demand-driven. Zanett's functional expertise and industry insights help our manufacturing clients achieve their business objectives through strategic investments in technology.

- › From business consulting to enabling technologies, Zanett has supported our manufacturing clients for over a decade. We help them identify opportunities to improve processes and utilize technology to deliver Real Enterprise Value™ and impact the bottom line. Our solutions reduce costs, create efficiencies, or support growth initiatives. For most manufacturing organizations, technology is a strategic enabler that helps you achieve your goals in delivering value to the enterprise. Zanett supports Oracle E-Business Suite, PeopleSoft and JD Edwards, for ERP. We also support Demantra for demand management and sales and operations planning. We support enterprise application integration with Oracle Fusion Middleware and SOA technologies.

› Solutions designed and built for manufacturers

We offer a range of solutions to address the core processes that drive value in manufacturing organizations:

- › Demand Planning
- › Inventory Optimization
- › Sales Operations Planning
- › Integrated Supply Chain
- › Finance and GL
