

# › Healthcare

There is **Strength** in our experience.

Healthcare today is all about providing the highest-quality care while balancing strict regulatory requirements, staffing shortages, and enormous pressure to control costs. To effectively manage this balancing act, organizations must have complete visibility into financial, clinical, and operational information. Zanett has had the privilege of supporting many healthcare organizations to use technology in achieving these objectives.

From business consulting to enabling technologies, Zanett is a partner that can grow with you as the healthcare landscape evolves. We help our healthcare clients identify opportunities to utilize technology to make improvements that ultimately enhance patient care, reduce costs, or create efficiencies. For many organizations, technology is a strategic enabler that helps you achieve your goals in delivering value to the enterprise. Zanett supports both PeopleSoft and Oracle E-Business Suite for ERP in our healthcare client base. We offer secure physician portal solutions and applications that integrate with clinical systems and other business applications including business intelligence.
