

> Aerospace & Defense

We share your mission.

The Aerospace and Defense industry faces pressure on multiple fronts. Contracts are getting more complex and global in nature; platform introductions are decreasing; competition is stiff; national security necessitates rigorous accountability. Zanett can help you successfully navigate these challenges.

> Improve Visibility into Your Business

Eliminating disparate systems, simplifying your infrastructure, and consolidating your data opens the door to greater possibilities. With the right tools, your organization can make better, more timely, and more informed decisions.

Improve Project & Contract Management

Managing projects and bidding effectively on new ones requires visibility into all aspects of the business. Zanett's contract and program management solutions give you the ability to manage the process from initial solicitation until the final contract is completed. In addition to simplifying cost containment, you will be able to manage risk on a project-by-project basis.

Manage Complex Supply Networks

Managing a global supplier network is critical in the A&D industry. Managing the process from design and engineering through assembly reduces lead times and the risk of obsolete inventory. With Zanett, you will have up-to-the-minute supply chain visibility, allowing you to respond quickly when changes occur.

Provide Full Lifecycle Support

The ability to provide full product lifecycle support is an important part of your business. Maximizing the revenue from profitable spare parts and maintenance will transform your bottom line.

> Gain Financial Control and Compliance

Meeting the financial scrutiny required in today's environment has put tremendous strain on the officers of A&D companies. Without a strong financial IT backbone, good corporate governance is difficult to achieve.

Get Full Operational Control

Provide your managers with real-time visibility into their operations, enabling rapid reporting and reducing costs.

Secure Your Data

Zanett's data security expertise ensures your data is safe and available only to those that need it.
